

Introduction 1

According to DRIVERKNOWLEDGE.COM, the average number of car accidents in the .U.S. every year is 6 million leaving more than 90 people dead in car accidents every day. 3 million people in the U.S. are injured every year in car accidents. Also, around 2 million drivers in car accidents experience permanent injuries every year. Most of these cases have 1 in 7 people not wearing seatbelt while driving. Road traffic injuries place a huge burden on low and middle income countries.

Research has shown that:

- seatbelts reduce the risk of death by 45%.
- seatbelts cut the risk of serious injury by 50%.
- people not wearing a seatbelt are 30 times more likely to be ejected from the vehicle during a crash.

Car crashes are one of the most common causes of death and injuries. Car accidents may be caused by several factors such as over speeding, Inattention/Distracted Driving, Defective Equipment/Poor Vehicle Maintenance, Intoxicated Driving Accidents (DUI), etc. This problem needs to be solved since it's claiming lives. Preventive actions like installing more street lights, building speed bumps, etc could be used in order to reduced accidents and more lives
